

Worked for 1m 7s

Trivoxo V2 — Complete Project Requirements & Technical Blueprint

Based on the existing website content, the brochure, the package catalogue, your correction to the **Capital Pulse Tour**, and the requirement that Trivoxo staff must be able to manage the platform **without coding**, I would define the new project as a **travel-commerce and experience-management platform**, not merely a redesigned company website.

The brochure establishes Trivoxo as a broader adventure/travel company covering hiking, cycling, cultural and historical tours, eco-tourism, day trips, corporate outings, event planning/logistics, expatriate and diaspora travel, team-building and customised travel packages.

Trivoxo brochure design

1. Project name

Trivoxo V2

Product type

Travel, Tour, Adventure, Events & Experience Commerce Platform

Primary domain

trivoxogh.com

Administration

trivoxogh.com/admin

Product vision

Transform Trivoxo from a relatively static travel website into a platform where customers can:

- Discover Ghana.
- Find experiences by interest or destination.
- Check availability.
- Book tours.
- Receive group discounts automatically.
- Pay with MoMo/cards/bank transfer.
- Receive confirmations and vouchers.
- Purchase event tickets.

- Manage their trips.
- Request customised itineraries.
- Request corporate/event-management proposals.
- Contact Trivoxo through contextual WhatsApp conversations.

At the same time, authorised Trivoxo staff should be able to:

- Create a new tour.
- Upload photos.
- change prices.
- Add or remove destinations.
- Change inclusions/exclusions.
- Publish events.
- Create ticket categories.
- Close specific booking dates.
- Mark tours sold out.
- Add manual bookings.
- Publish articles.
- Manage customers.
- View payments.
- Issue refunds.
- Create coupons.
- View reports.

without writing code or contacting the developer for routine business operations.

2. Important architectural decision

I would slightly revise my previous stack recommendation.

Now that **easy, zero-code administration is a hard requirement**, I recommend using:

Payload CMS as the unified Trivoxo administration system

instead of having Sanity for content plus a completely separate custom administration application.

Payload automatically generates a React/Next.js administration panel from the application's data structure and allows that interface to be customised or white-

labelled. It also supports authentication, access control, drafts, versions and APIs. Payload +1

It also supports autosaving, drafts and scheduled publishing, which are exactly the kinds of safeguards nontechnical staff need. Payl... +1

So Trivoxo can have **one back office**:

trivoxogh.com/admin

Dashboard
Tours
Destinations
Events
Bookings
Customers
Corporate Enquiries
Custom Trips
Payments
Coupons
Reviews
Ghana Guide
Pages
Media
Newsletter
Reports
Users
Settings

Much cleaner.

3. Recommended technology stack — 2026

Area	Recommended technology
Main framework	Next.js 16.2+
Language	TypeScript
UI	React
Styling	Tailwind CSS 4.3+
Component foundation	shadcn/ui + Radix
Animation	Motion

Area	Recommended technology
CMS/Admin	Payload CMS
Database	PostgreSQL
Managed PostgreSQL	Supabase
Customer authentication	Supabase Auth , where required
Media	Cloudinary
Payments	Paystack Ghana
Payment fallback later	Hubtel
Transactional email	Resend + React Email
CDN/DNS/WAF	Cloudflare
Hosting	Vercel
Error monitoring	Sentry
Product analytics	PostHog
Web analytics	GA4
SEO monitoring	Google Search Console + Bing Webmaster Tools
Maps	Mapbox or Google Maps
Forms	React Hook Form + Zod
Testing	Vitest + Playwright
CI/CD	GitHub Actions + Vercel Preview Deployments
Repository	GitHub
Rate limiting	Upstash Redis / Cloudflare
Bot protection	Cloudflare Turnstile

Area	Recommended technology
QR generation	Server-side signed QR tickets
PDF vouchers	React-based server-generated documents

Next.js 16.2 is the current generation and introduced further rendering, development and Turbopack improvements. Payload's current documentation supports Next.js 16.2.6+ installations. [Next.js +1](#)

Tailwind's current 4.x generation is also appropriate; Tailwind 4.3 added further modern CSS utilities and improvements in May 2026. [Tailwind CSS](#)

4. Why PostgreSQL

Tourism bookings are highly relational.

For example:

```
Tour
  ↓
Departure
  ↓
Availability
  ↓
Booking
  ↓
Guests
  ↓
Payment
  ↓
Voucher
```

And:

```
Event
  ↓
Ticket Type
  ↓
Order
  ↓
Ticket
  ↓
QR Check-in
```

PostgreSQL is therefore a better foundation than attempting to store the booking engine in a document-only CMS.

Supabase provides a full PostgreSQL database rather than a proprietary abstraction, with managed database functionality and backup options.

Supabase

5. Why Payload CMS fits this project

Payload becomes both:

Content management

For:

- Pages
- Blog/Ghana Guide
- FAQs
- Destinations
- Images
- Testimonials
- Homepage banners

Operations management

For:

- Tours
- Tour prices
- Tour departures
- Availability
- Bookings
- Customers
- Events
- Event tickets
- Corporate enquiries
- Coupons
- Reviews

Payload also supports granular role-based access control at collection, document and field level. Payl...

That means the Finance person doesn't need access to Blog Posts, and a Content Editor doesn't need permission to process refunds.

6. Brand direction

The brochure presents the company as:

Explore. Adventure. Connect.

and describes Trivoxo as delivering outdoor experiences involving hiking, cycling, tours and nature-based exploration for individuals, groups, expatriates and diaspora returnees.

Trivoxo brochure design

The existing website, however, currently uses:

Experience. Explore. Express.

This is one branding issue to settle before final visual design.

My recommended primary positioning

EXPLORE. ADVENTURE. CONNECT.

And underneath:

Experience Ghana Beyond the Ordinary.

Then:

Curated tours, outdoor adventures, cultural journeys, premium escapes and memorable events across Ghana.

This better reflects the brochure's expanded business model.

7. Visual design direction

I would define the design style as:

Modern Ghanaian Adventure × Premium Travel Editorial

Not a generic travel template.

The brochure already gives us a strong base:

- Orange
- Golden yellow
- Very dark navy

- White
- Neutral greys
- Outdoor photography
- Adventure imagery

Rather than inventing exact HEX values, we should extract the actual colours from the final vector logo/branding assets.

Design tokens should then become:

CSS

```
--brand-primary  
--brand-secondary  
--brand-accent  
  
--background  
--surface  
--surface-elevated  
  
--text-primary  
--text-secondary  
--text-muted  
  
--border  
--success  
--warning  
--danger
```

8. Photography should drive the design

The biggest visual asset for Trivoxo is not animation.

It is:

Ghana itself.

Large photography should showcase:

- Kakum
- Cape Coast
- Elmina
- Accra
- Volta Lake
- Afadjato

- Wli Falls
- Shai Hills
- Jamestown
- Makola
- cycling
- hiking
- customers enjoying activities
- events
- food
- nightlife

Cloudinary is particularly appropriate because its Next.js tooling supports image/video transformations, optimisation and delivery. [Cloudinary +1](#)

9. Main business categories

Based on the brochure, I would organise Trivoxo around six top-level offerings.

1. Tours & Experiences

- City tours
- Culture
- History
- Heritage
- Eco-tourism
- Sightseeing
- Weekend trips

2. Hiking & Adventure

- Mountain hikes
- Nature trails
- Beginner hikes
- Advanced hikes
- Private hiking
- Group hiking

3. Cycling & Biking

- Recreational cycling
- Adventure biking
- Fitness rides
- Community cycling

4. Premium Experiences

- Resorts
- Luxury river experiences
- Cruises
- Wellness
- Private day-outs

5. Events & Corporate

- Corporate outings
- Conferences
- Retreats
- Team building
- Event planning
- Venue setup
- Logistics
- On-ground management

6. Tailor-Made Travel

- Diaspora travel
- Expatriate tours
- Private groups
- Multi-day trips
- Executive vacations
- Customised itineraries

These map directly to the company's brochure positioning.

Trivoxo brochure design

10. Website information architecture

My recommended sitemap is:

HOME

EXPERIENCES

- └─ All Experiences
- └─ City & Culture
- └─ History & Heritage
- └─ Hiking & Adventure
- └─ Cycling
- └─ Nature & Wildlife
- └─ Water & Cruises
- └─ Premium Day-Outs

- └─ Night Experiences
- └─ Weekend Getaways

DESTINATIONS

- └─ Accra
- └─ Cape Coast
- └─ Elmina
- └─ Central Region
- └─ Volta Region
- └─ Akosombo

[Join Trivoxo]

24. Current tour inventory

The initial database should be preloaded with the packages contained in the brochure.

Tour	Current published price
Capital Pulse Tour	GHS 1,400
Heritage & Canopy Quest	GHS 1,700
Remembrance Trail	GHS 1,900
Wild Plains & River Cruise	GHS 1,750
Volta Wave Rider – Dodi Island Experience	GHS 2,600
Mountain Mist & Canopy Cascade	GHS 1,800
Peak & Cascade Explorer	GHS 1,900
Caves & Cascades	GHS 1,700
Luxury Riverfront Escape	GHS 1,500
Eco-Luxury Wilderness Experience	GHS 1,200

Tour	Current published price
Legacy & Clay Trail	GHS 1,600
Garden & Gold Trail	GHS 1,500
Accra By Night: Culture & Capital Glow	GHS 700

The Cape Coast/heritage products appear on page 3, while the Volta/adventure products continue on page 4.

Trivoxo brochure design +1

The Eastern Region and premium day-out experiences appear on page 5.

Trivoxo brochure design

Garden & Gold and Accra By Night appear on page 6.

Trivoxo brochure design

25. Capital Pulse Tour — corrected authoritative website version

This should override the current brochure content.

The brochure currently lists Makola Market, Jamestown, Black Star Square, National Museum and Arts Centre, and presently states that lunch is included.

Trivoxo brochure design

Your correction is:

The Capital Pulse Tour

Price: GHS 1,400 per person

Stops

```
Makola Market
↓
Historic Jamestown
↓
Black Star Square / Independence Square
↓
Kwame Nkrumah Memorial Park & Mausoleum
↓
National Museum of Ghana
↓
Arts Centre / Centre for National Culture
```

Included

- Attraction entry fees included in the package
- Air-conditioned transportation
- Tour coordination/guide
- Applicable pickup/drop-off arrangement

Excluded

Lunch and meals

Also exclude by default:

- Personal shopping
- Optional activities
- Personal expenses
- Anything not stated as included

26. One Capital Pulse content issue to resolve

The brochure's route does not list Osu, but its description refers to transitioning into the "modern, artsy rhythm of Osu."

Trivoxo brochure design

Before publishing the new page, Trivoxo should decide whether:

A. Osu is actually part of the tour

or

B. The Osu reference should be removed from the description.

I would not silently make that decision.

27. Tour listing page

Route:

/experiences

Customer sees:

Find an Experience

Search _____

Destination

- ☐ Accra
- ☐ Cape Coast
- ☐ Volta
- ☐ Eastern Region
- ☐ Ada

Related Experiences

30. Itinerary component

Instead of long paragraphs:

07:00

Pickup from Accra

|

09:30

Destination arrival

|

10:00

Activity begins

|

13:00

Next stop

|

16:30

Return journey

|

19:00

Accra arrival

Staff creates/reorders these stops from admin using drag-and-drop controls.

31. Different tours require different metadata

Hiking

Store:

- Difficulty
- Distance
- Elevation
- Approximate duration
- Terrain
- Fitness recommendation
- Required footwear
- Required equipment

Cycling

- Cycling distance
- Difficulty
- Bike provided?
- Helmet provided?
- Road/trail type
- Minimum age

Cruises

- Boarding time
- Cruise duration
- Meal included?
- Departure point
- Boat type where applicable

Culture/history

- Attractions
- Guide
- Entry fees
- Photography limitations where applicable

Luxury experiences

- Resort
- Meals

- Activities
- Dress guidance
- Transportation

This lets the website present useful information instead of forcing every product into the same template.

32. Pricing engine

The brochure introduces an important rule:

Standard base pricing requires at least **2 people**, while groups of **3 or more** should receive reduced per-person pricing.

Trivoxo brochure design

Therefore the database must support:

Pricing Strategy

- Fixed price per person
- Tiered group pricing
- Price per group
- Private tour price
- Request quotation

33. Group pricing

Admin configuration:

Capital Pulse

Minimum travellers

2

2 travellers

GHS 1,400 / person

3-4 travellers

GHS _____ / person

5-8 travellers

GHS _____ / person

9-14 travellers

GHS _____ / person

The brochure does not provide the actual discounted tiers, so those figures must come from Trivoxo.

34. International/local pricing

Capital Pulse specifically labels GHS 1,400 as the price for an **International Tourist**.

Trivoxo brochure design

Therefore the system should technically support:

Visitor pricing

International Visitor

GHS XXXX

Ghana Resident

GHS XXXX

But it should remain disabled until Trivoxo provides official resident/local pricing.

We should not invent it.

35. Seasonal pricing

Support:

Standard

GHS 1,400

December Season

Date range

GHS XXXX

Public Holiday

GHS XXXX

Special Promotion

GHS XXXX

This doesn't mean Trivoxo must use seasonal pricing immediately.

It makes the system future-proof.

36. Availability engine

Each experience can have:

Every day

Selected weekdays

Specific dates

Public holidays

On request only

Private bookings only

The Dodi Island experience is explicitly limited to weekends and public holidays in the brochure.

Trivoxo brochure design

Its admin configuration can therefore be:

MON	OFF
TUE	OFF
WED	OFF
THU	OFF
FRI	OFF
SAT	ON
SUN	ON

Ghana Public Holidays

ON

37. Capacity controls

Admin can define:

Minimum guests

2

Maximum guests

15

Maximum guests per departure

15

Minimum booking notice
24 hours

Maximum advance booking
180 days

38. Booking holds

Critical requirement.

Suppose only one remaining ticket/seat exists.

Two customers should not be able to pay for it simultaneously.

Process:

```
graph TD; A[AVAILABLE] --> B[CUSTOMER SELECTS]; B --> C[TEMPORARY HOLD]; C --> D[PAYMENT]; D --> E[PAYSTACK WEBHOOK VERIFIED]; E --> F[CONFIRMED];
```

If payment doesn't finish:

```
graph TD; A[HOLD] --> B[EXPIRED]; B --> C[CAPACITY RESTORED];
```

The authoritative inventory decision should happen transactionally in PostgreSQL, not merely through frontend JavaScript.

39. Booking experience

Do not force account creation before checkout.

Flow:

Tour

Date

Travellers

Add-ons

Contact Information

Pickup Information

Payment

Confirmation

Only after booking do we offer:

Create an account to manage all your Trivoxo trips.

40. Booking form requirements

Collect:

Booker

- First name
- Last name
- Email
- Phone/WhatsApp
- Country
- Emergency contact where necessary

Trip

- Date
- Number of adults
- Number of children where supported
- Pickup
- Special request
- Dietary requirements where meals apply

Additional travellers

Depending on the package:

- Names

- Age/category
- Relevant safety information

Avoid collecting unnecessary personal information.

41. Booking statuses

Use proper states:

DRAFT

HELD

PENDING_PAYMENT

PAID

CONFIRMED

IN_PROGRESS

COMPLETED

CANCELLED

REFUND_PENDING

PARTIALLY_REFUNDED

REFUNDED

EXPIRED

NO_SHOW

42. Booking reference

Customer-facing references:

TVX-26-A8F41

Never expose internal database IDs.

43. My Trips

Public navigation should say:

My Trips

rather than the more technical "My Bookings".

Example:

WELCOME, AMA

UPCOMING

Capital Pulse Tour
17 September 2026

4 Travellers
CONFIRMED

[View Trip]
[Download Voucher]
[Contact Trivoxo]

PAST

Accra By Night
12 August 2026

[Leave Review]
[Book Again]

44. Guest booking management

Accountless users receive:

Manage My Trip

through a secure emailed token.

This is better than forcing registration.

Supabase Auth can later provide password, OTP and magic-link authentication when full customer accounts are enabled.

Supab...

45. Payment architecture

For Ghana, I would make **Paystack** the primary provider.

Currently Paystack Ghana supports MoMo from MTN, Telecel and AirtelTigo.

Paystack Sup...

Its Ghana offering also supports payment options including cards and bank transfer, with local and international transaction pricing currently advertised at 1.95%.

Paystack +1

Customer options could therefore include:

MTN Mobile Money
Telecel Cash
AT Money
Visa
Mastercard
Bank Transfer

46. Payment security requirement

The browser returning:

Payment Successful

is **not enough**.

Process must be:

```
graph TD
    A[Customer pays] --> B[Paystack notifies server]
    B --> C[Webhook signature validated]
    C --> D[Reference validated]
    D --> E[Amount validated]
    E --> F[Currency validated]
    F --> G[Booking updated]
    G --> H[Confirmation generated]
```

Webhook processing must also be idempotent so the same payment notification cannot create two bookings.

47. Payments database

Store:

```
payment_reference  
booking_id  
gateway  
gateway_reference  
amount  
currency  
status  
channel  
paid_at  
gateway_response  
refund_status  
created_at
```

Never store card numbers or PINs.

48. Automatic payment confirmation

After payment:

You're booked! 🎉

Capital Pulse Tour

17 September 2026

4 Travellers

Booking

TVX-26-A8F41

PAID

Buttons:

```
[ View Trip ]  
[ Download Voucher ]  
[ Add to Calendar ]  
[ WhatsApp Trivoxo ]
```

49. Email system

Automatic emails:

- Booking received
 - Payment confirmed
 - Booking confirmed
 - Payment failed
 - Booking cancelled
 - Refund confirmed
 - Departure reminder
 - Itinerary updated
 - Tour rescheduled
 - Event ticket
 - Event reminder
 - Corporate enquiry acknowledgement
 - Custom itinerary sent
 - Review request
-

50. Booking reminders

For example:

48 hours before

| Your Trivoxo adventure is coming up.

Morning of tour

| Your Capital Pulse experience begins today.

Include:

- meeting location
 - departure time
 - guide/contact
 - what to bring
-

51. WhatsApp

Each tour should have contextual WhatsApp.

Capital Pulse:

Hi Trivoxo, I'm interested in the Capital Pulse Tour for 4 travellers on 18 September.

Peak & Cascade:

Hi Trivoxo, I'd like to ask about the fitness requirement for Peak & Cascade Explorer.

Much better than:

Hello.

52. Admin — no coding requirement

The main requirement can be written as:

A trained Trivoxo employee with normal computer literacy must be able to perform routine website and booking operations without developer assistance.

This includes content creation, publishing and operational updates.

53. Admin dashboard

Example:

Good Morning

TODAY

4

Tours Today

69. Custom trips

The brochure explicitly says that multi-day tours, corporate conferences, executive retreats and private luxury vacations are customised around group size, budget and travel goals.

Trivoxo brochure design

Therefore create:

Build My Ghana Experience

Questions:

When are you visiting?

How many travellers?

How many days?

What interests you?

- ☐ History
- ☐ Culture
- ☐ Food
- ☐ Hiking
- ☐ Adventure
- ☐ Beaches
- ☐ Nature
- ☐ Nightlife
- ☐ Art
- ☐ Wellness

Budget?

Need accommodation?

Need transport?

Need airport transfer?

Private guide?

Anything we should know?

Then:

Request My Itinerary

70. Travel services

The existing website lists:

- Airport pickup/drop-off
- Hotel booking/accommodation
- Car rentals
- Corporate travel
- Ticketing

For V1, I would **not attempt to build a full airline GDS or Booking.com competitor.**

Use enquiry workflows.

71. Flight ticketing

Page:

/travel-services/flights

Form:

One Way / Return / Multi-City

Departure city

Destination

Departure date

Return date

Adults

Children

Infants

Cabin

Preferred airline

Baggage requirements

Contact information

Then:

Request Flight Options

72. Accommodation

Initially:

Request Accommodation

Later:

Trivoxo partner-property catalogue.

Only move to live hotel inventory if there is a commercial reason and suitable supplier API.

73. Airport transport

This could become bookable directly because the variables are simpler:

```
Airport
Pickup / Drop-off

Date
Time

Flight number

Destination

Passengers

Luggage

Vehicle
```

74. Destinations architecture

Each destination becomes an SEO/content hub.

Example:

```
/destinations/cape-coast
```

Sections:

```
Cape Coast
```

Why Visit

Top Things to Do

75. Ghana Guide

Rename the visible "Blog" navigation to:

Ghana Guide

Categories:

Things to Do

Travel Planning

Accra

Cape Coast

Volta

Food & Culture

Adventure

Events

Corporate Travel

Nightlife

Existing articles remain valuable, including topics such as Accra city tours and packing.

76. Search

Global search:

Search Trivoxo

cape

Instant suggestions:

DESTINATION

Cape Coast

EXPERIENCES

Heritage & Canopy Quest

GHS 1,700

Remembrance Trail

GHS 1,900

GHANA GUIDE

Cape Coast Travel Guide

77. Reviews

Only completed bookings should automatically receive a verified-review invitation.

Show:

★★★★★

4.9

184 Verified Travellers

Filter:

Solo

Couples

Friends

78. Cancellation policy support

Policies should be configurable.

Example schema:

Free cancellation:
More than XX hours

Partial refund:
XX-XX hours

No refund:
Less than XX hours

Trivoxo needs to provide its actual policy before implementation.

79. Coupons

Admin:

DECEMBER10

10% OFF

Valid
1 Dec - 15 Dec

Tours
All

Maximum uses
50

Support:

- percentage
- fixed amount
- selected tours
- selected events
- minimum order

- date limits
 - usage limits
-

80. Admin roles

Super Admin

Everything.

Operations Manager

Tours, bookings, customers and availability.

Content Editor

Pages, articles, destinations, tours and photos.

Event Manager

Events, tickets and check-in.

Finance

Payments, refunds and reports.

Check-in Staff

Guest list and QR scanner only.

Payload's access-control model is suitable for exactly this type of role restriction. Payl...

81. Core database entities

At minimum:

```

notifications

audit_logs

82. Content relationships

For example:

Destination

|

|—— Experiences

|

|—— Articles

This lets Google and customers naturally navigate Trivoxo.

83. SEO requirements

All important pages need server-generated metadata.

Tour

Title
Description
Canonical
Open Graph
Twitter/X metadata
Breadcrumbs
Structured data

Event

Use Event structured data.

Blog

Article structured data.

Business

Organization/LocalBusiness where appropriate.

Also:

- XML sitemap
 - robots.txt
 - canonical handling
 - redirects
 - image alt text
 - semantic headings
 - internal linking
 - breadcrumb navigation
 - pagination handling
-

84. Social sharing

Each package should produce its own WhatsApp/social card.

Example:

[CAPITAL PULSE IMAGE]

CAPITAL PULSE TOUR
Discover Accra

From GHS 1,400

TRIVOXO

No generic homepage preview when someone shares a tour.

85. Performance requirements

Target:

Metric	Target
LCP	≤ 2.5 sec
INP	≤ 200 ms
CLS	≤ 0.1
Lighthouse Performance	≥ 90
Accessibility	≥ 95
SEO	≥ 95
Best Practices	≥ 95

Travel photography must not destroy mobile performance.

86. Accessibility

Target **WCAG 2.2 AA**.

Requirements include:

- Keyboard navigation

- Accessible dialogs
 - Screen-reader support
 - Proper labels
 - Visible focus
 - Colour contrast
 - Accessible forms
 - Reduced-motion support
 - Touch targets
 - Semantic HTML
 - Correct headings
 - Alt text
-

87. Mobile-first design

Most travel/social discovery is likely to happen from phones.

Important paths should work exceptionally well on mobile:

```
graph TD; A[Instagram] --> B[Tour]; B --> C[Availability]; C --> D[Booking]; D --> E[MoMo]; E --> F[Confirmation];
```

Instagram
↓
Tour
↓
Availability
↓
Booking
↓
MoMo
↓
Confirmation

This journey should require minimal typing.

88. Security requirements

Mandatory:

- Server-side secrets only
- HTTPS
- CSP
- Webhook signature validation
- RBAC
- Rate limiting

- Turnstile on risky public forms
 - Input validation
 - Secure cookies
 - XSS protection
 - CSRF controls where applicable
 - SQL injection protection
 - Signed booking-management tokens
 - Signed QR ticket tokens
 - Admin 2FA where supported
 - Audit logs
 - Backup strategy
 - Dependency monitoring
 - Secrets separated by environment
 - Production/staging separation
-

89. Analytics

Track actual business events rather than only page views.

```
experience_viewed
destination_viewed

search_performed

date_selected

travellers_selected

booking_started

checkout_started

payment_started

payment_failed

booking_completed

whatsapp_clicked

event_viewed

ticket_selected

ticket_purchased
```

custom_trip_started

custom_trip_submitted

corporate_enquiry_submitted

newsletter_subscribed

90. Business dashboard

Eventually management should see:

Revenue Today

Revenue This Month

Bookings

Travellers

Average Booking Value

Top Experience

Top Destination

Booking Sources

Website Conversion Rate

Payment Failure Rate

Cancellation Rate

Most Profitable Tour

Upcoming Capacity

Event Ticket Sales

Corporate Pipeline

91. Testing requirements

Unit tests

Pricing, coupons, availability, refunds.

Integration tests

Paystack, booking transaction, database.

E2E tests

Playwright should test:

Search
→ Tour
→ Date
→ Booking
→ Checkout
→ Confirmation

Also:

Event
→ Ticket
→ Payment
→ QR

And:

Admin
→ Create tour
→ Publish
→ Tour appears publicly

92. Deployment architecture

93. Environments

Use:

Development

Staging

Production

Never test payments or schema changes directly against production.

94. Git workflow

```
graph TD; A[Issue] --> B[Feature Branch]; B --> C[Pull Request]; C --> D[Automated Tests]; D --> E[Vercel Preview]; E --> F[Review]; F --> G[Merge]; G --> H[Production];
```

95. AI-assisted development

Since you plan to use AI/vibe coding, I would make the repository unusually strict.

AI should be excellent for:

- UI components

- page layouts
- Payload collections
- CRUD
- schemas
- forms
- emails
- tests
- SEO
- migrations
- documentation

AI code involving the following should receive deliberate human review:

- payments
- authentication
- booking inventory
- concurrency
- refunds
- permissions
- webhooks
- pricing calculations

96. Migration requirements

Before replacing the existing WordPress site:

Export:

- Every URL
- Article
- Title
- Meta description
- Image
- Tour
- Page
- Existing useful booking information
- Redirect mappings

Then:

OLD

/book-a-tour/

/services/

/about-us/

map to corresponding new URLs using proper 301 redirects.

Do not discard existing SEO equity.

97. Footer

Recommended:

TikTok
LinkedIn

98. Contact-information issue that needs confirmation

Your current website information gives:

0593962111

The brochure instead lists:

+233 531 014 111

+233 244 833 280

Trivoxo brochure design

The email appears consistently as:

info@trivoxoghana.com

The address you provided is:

Plantsville Residence, Poultry Farm Ave, Accra, Ghana

Before launch, we should establish one canonical primary phone/WhatsApp number and determine whether the other numbers should remain as alternatives.

99. MVP — Phase 1

This is what I would actually build first.

Public

- Homepage
- Experiences
- Experience details
- Destinations
- Events
- Corporate
- Custom Trips
- Travel Services
- Ghana Guide
- About
- Contact
- FAQs

- Legal

Booking

- Availability
- Tiered pricing
- Group discounts
- Booking holds
- Checkout
- Paystack
- Confirmation
- Email
- My Trips
- Manual booking

Admin

- Dashboard
- Tours
- Destinations
- Pricing
- Availability
- Bookings
- Customers
- Pages
- Blog
- Media
- Corporate enquiries
- Custom trip enquiries
- Payments
- Users

Events

- Create event
- Tickets
- Purchase
- QR
- Check-in

100. Phase 2

After the core system is proven:

- Verified reviews
 - Coupons
 - Gift cards
 - Referral codes
 - Advanced reporting
 - Abandoned-booking reminders
 - WhatsApp Business automation
 - PWA event scanner
 - Advanced corporate CRM
 - Partner/agent bookings
 - Affiliate tracking
 - Multilingual support
 - Loyalty programme
 - Accommodation catalogue
-

101. Phase 3

Potential future additions:

AI Travel Concierge

Customer:

I'm coming to Ghana for 6 days. I like history, food and easy hikes.

Trivoxo generates recommendations using Trivoxo's own approved product catalogue.

Dynamic itinerary builder

Partner portal

Hotels, travel agents and companies receive restricted access.

Full multi-day package engine

API integrations for hotel/flight suppliers

Only where commercially justified.

102. Requirements still needed from Trivoxo

Before coding the booking logic, these business rules must be finalised:

Information	Status
Current package names	Available
Advertised prices	Available
Capital Pulse corrected itinerary	Confirmed
Capital Pulse lunch	Excluded — confirmed
Capital Pulse Osu question	Needs clarification
Minimum standard booking	2 travellers
3+ traveller discount rule	Confirmed concept
Exact group discount amounts	Missing
Local/resident prices	Missing
International prices for all packages	Needs confirmation
Child prices/ages	Missing
Tour duration	Missing for several packages
Departure times	Missing
Pickup zones	Missing
Maximum capacity	Missing
Detailed inclusions per package	Needs completion
Detailed exclusions	Needs completion
Cancellation policy	Missing
Refund policy	Missing
No-show policy	Missing
Rescheduling policy	Missing
Private-tour pricing	Missing

Information	Status
December pricing	Needs decision
Guide languages	Needs decision
Event ticket refund rules	Missing
Official primary phone	Needs confirmation
Official slogan	Needs confirmation

These gaps are normal at this stage. The important thing is that the system architecture supports them without needing to be redesigned later.

103. Final recommended architecture

If development started today, this is the stack I would commit to:

TRIVOX0 V2

Next.js 16.2+

React

TypeScript

Tailwind CSS 4.3+

shadcn/ui

Motion

Payload CMS

PostgreSQL

Supabase

Cloudinary

Paystack Ghana

Resend

Cloudflare

Vercel

Sentry

PostHog

GA4

Zod

React Hook Form

Vitest
Playwright

GitHub
GitHub Actions

The biggest change from my earlier recommendation is **Payload instead of Sanity as the primary back-office CMS**. The reason is your new explicit requirement that Trivoxo staff should be able to operate the website themselves. Payload gives us a fully generated and deeply customisable admin interface in the same Next.js architecture, rather than requiring Trivoxo to learn one CMS for pages and a second administration system for bookings. Payl... +1

What we're really building

This should no longer be considered:

"A new Trivoxo website."

The project specification is better described as:

Trivoxo Digital Experience & Booking Platform — a modern Ghana travel-commerce system for tours, outdoor adventures, events, corporate travel, custom trips and travel services, backed by a zero-code operational CMS.

That distinction will keep the development focused on **business capability, conversion, operations and future expansion**, instead of simply making the existing WordPress pages look nicer.
